Dear Hiring Team at Jobs Ai,

The opportunity to contribute to Machine Learning Engineer - Computer Vision (Remote) at Jobs Ai directly aligns with my hands-on experience developing autonomous robotic systems, computer vision models, and full-stack software solutions including Shashwat's Bot: Custom 12-DOF Quadruped Robot.

As a Robotics and Artificial Intelligence engineering student, I have focused my work on building production-grade physical AI platforms and intelligent software pipelines. In my recent work on Shashwat's Bot: Custom 12-DOF Quadruped Robot, I engineered real-time control logic, integrated sensor feedback, and optimized system performance under real-world constraints.

My background spans ROS2, Python, C++, and modern AI/ML frameworks. At Jobs Ai, I am particularly excited to apply these competencies to solve engineering challenges in AI / ML.

I would welcome the opportunity to discuss how my technical background and project experience align with your engineering goals. Thank you for your time and consideration.

Sincerely,

Shashwat Sahu
